INSPIRA

Empowering the Enterprise

❖ **Enterprise 2.0 Solutions**

❖ **Mobility Computing**

❖ **Custom Development**

Overview

At Inspira, we provide technology solutions to global clients in select verticals which demand high performance, high availability, scalability and security. We implement standards based software solutions that provide extensibility and adaptability exacted by interfacing with multi vendor, multi architecture, multi platform applications. Our low-risk Global Delivery Model will reduce costs while meeting your schedules and quality parameters.

Alliances are established with industry leaders to bring the best-of-the-breed technology solutions to meet broad customer requirements.

Our process driven methodologies ensure high quality and delivery predictability to our customers. The State-of-art Infrastructure will meet most of our customer demands. Our Management Team brings to the organization several years of expertise in managing projects and providing solutions to global customers in vertical markets ranging from High Technology to Banking and Insurance as well as Healthcare to Construction companies.

Enterprise 2.0 Solutions

Enterprise 2.0 solutions are fairly new to the market. They take advantage of recent Web 2.0 technologies including LAMP infrastructure and AJAX. These technologies and the use of the SLATES model allow Inspira to think out of the box and create a compelling and differentiating solution that help organizations improve productivity and operating efficiencies driving employees to increase performance. Blogs, Wikis, Unstructured Searches, Links, RSS Feeds. These technologies push the consumption of information to very high levels and open up new possibilities to Enterprises.

Improving processes for further efficiencies and productivity is becoming difficult to achieve. Collaborating with Enterprise 2.0 drives High Value information upwards, outward, and inwards, transforming business productivity. Enterprise 2.0 is **catching on in corporations which are looking for higher productivity through networking** and collaboration. This opportunity using Social networking outside the corporations is already proving its value; now taken to the enterprise, it drives profitability.

Mobility Computing Solutions

Our Mobile Computing solutions provide Enterprises with flexibility and precision. The solutions are unique and cost effective, they provide Enterprises the ability to extend the enterprise to anyone anywhere. The solutions designed will assist Enterprises to automate business processes and improve the information exchange between the Enterprise, employees and customers; resulting in improved business processes that drive productivity, efficiencies and more effective service quality. Our Mobile Computing solutions are tailor made to suit many enterprise objectives and seamlessly extend the Enterprise's boundaries.

Mobile Internet Devices and 3G Telephony proliferation combined with client requirements and requests have led to the inception of Mobility Solutions at Inspira.

Today's managers use their mobile devices as decision support systems, as well as communication systems. Large number of enterprises are implementing "Mobile Computing" to increase their employee's productivity, contribution, and ability whenever they need and where ever they are. The use of mobile devices to perform a variety of functions frees the worker from walled offices creating a nimble and mobile contributor.

Services

Our Technology Services are designed to "Empower your Enterprise" and lead the competition. Our services commence at feasibility study and end at product support with client management. While designing your solutions, we take into account the stakeholders' aspirations and industry trends as well as existing frameworks and components for delivering higher returns on your investment. Our customer centered services will mean savings to you and a trusted long term relationship for us.

Our Services include SOA, Web Services, Workflow, Solution Integration, Data Management, and Business Intelligence development activities.

Our Services cover:

- Timely Delivery
- High Quality
- Messaging /Interfacing Standards (for communications and interfacing with partner systems) like ACORD, IFX, SWIFT, ebXML, Rosetta Net etc
- Transaction Scalability
- Transaction Security
- Role based Entitlement

Custom Development

No Enterprise can run forever with Packaged Applications or previously developed in-house Solutions. As time passes by, all applications show the areas that need to be covered by custom development. There are also times, where there is no real solution in the market that will serve your specific needs.

Inspira addresses such needs through bleeding-edge technologies to move ahead of the competition.

Legacy Management

Many years of legacy application handling and partner's industry leading tool set has given us the PRIDE to do "Application Porting" and "Re-Engineering" tasks with grace and timeliness.

Porting

There are different types of Application Porting. Platform Change, Dialect Change, and Data-base Change are the various porting scenarios. We are confident of addressing all these scenarios of porting to make applications available on the newer hardware/software platforms.

Application Management

Enterprises can become competitive by concentrating on their core Businesses. IT in all these corporations is taking the center stage; as they are depending on it for every conceivable thing they do.

- We manage your applications on wider platform and technology range.

- We reduce application complexity by re-organizing, while doing improvements on the application.

- We will run statistics on the application modules to prioritize modules for re-design or fine-tuning.
